NOAA Chart 14806

A reduced-scale NOAA nautical chart for small boaters When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA's Office of Coast Survey, the nation's chartmaker

## Published by the National Oceanic and Atmospheric Administration National Ocean Service Office of Coast Survey

### What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America's commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

### What is a BookletChart<sup>™</sup>?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

### **Notice to Mariners Correction Status**

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at <a href="http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=148">http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=148</a> 06

(Selected Excerpts from Coast Pilot)
Thirtymile Point Light (43°22.5'N.,
78°29.2'W.), 60 feet above the water, is
shown from a square tower on the NE
corner of a two story house on Thirtymile
Point. A radio mast is 50 feet SW of the
light.

From Thirtymile Point, the shoreline trends SW for about 12 miles to Olcott, thence about 6 miles to Wilson, and continues SW for about 12.3 miles to the mouth of the Niagara River. From

Thirtymile Point to about 2.4 miles W of Olcott, deep water is within 0.3 mile of the shore, but from the latter point to near the mouth of Niagara River, the bank extends about 0.7 mile from shore.

The creek is entered from Lake Ontario through a dredged channel between two piers. The W pier is marked by a light. In October 2003, the controlling depth was 9.3 feet in the dredged channel. Depths of about 5 to 7 feet were available to the fixed highway bridge 0.4 mile above the entrance. The channel, however, is unstable because of mud deposits from Eighteenmile Creek and drifting sand from the W. A rock ledge with a least depth of 10.5 feet is across the entrance channel 500 feet lakeward of the piers.

Several marinas in the creek provide transient berths, gasoline, diesel fuel, water, ice, electricity, marine supplies, a launching ramp, a 30-ton mobile lift, and hull, engine, and electronic repairs. In 1977, depths of 6 to 11 feet were reported alongside the berths.

Wilson Harbor is in the mouth of East Branch Twelvemile Creek, about 12 miles E of the mouth of the Niagara River. The widened mouth of the creek forms Tuscarora Bay, which is about 2 feet deep in its natural depth and provides good anchorage for shallow-draft vessels. The entrance to the harbor from Lake Ontario is through a dredged channel that leads between parallel piers and thence upstream for 0.8 mile through Tuscarora Bay. The W pier is marked by a light, and daybeacons and buoys mark the channel through Tuscarora Bay. In June 2004, the controlling depths were 5.7 feet in the entrance and between the piers to the Public Dock on the E side of the river near the entrance, thence 4.1 feet (5.1 feet at midchannel) to the head of the project through Tuscarora Bay.

Several marinas in Tuscarora Bay provide transient berths, gasoline, diesel fuel, water, ice, electricity, sewage pump-out, marine supplies, launching ramps, a 25-ton mobile hoist, and hull, engine, and electronic repairs. In 1977, depths of 4½ to 10 feet were reported alongside the berths

**Anchorage.**—A Canadian anchorage area is on the west side of the river about 2 miles above the mouth.

**Lewiston, NY**, on the east side of the river about 7 miles above the mouth, is the head of navigation on the lower Niagara River. In 2000, the town landing had a large 300-foot dock with a reported depth of 8 feet alongside. A launch area and transient slip area was also available at the landing.

**Queenston, ON**, is on the west side of the river opposite Lewiston. Sand is received at a 300-foot wharf owned and operated by D. G. Bawtinheimer, Ltd. In 1977, depths of 12 feet were reported alongside. The portion of the lower Niagara River upstream from Lewiston and Queenston to **American Falls** and **Horseshoe Falls** is considered not navigable because of a 4-mile section of heavy rapids. Several bridges and overhead cables cross this section of the river.

From the International boundary at the Niagara River, the Canadian shoreline extends W for 2.9 miles to **Four Mile Point**, thence southwest for 11.5 miles past Port Weller and Port Dalhousie, and thence westnorthwest for 25 miles to Hamilton Harbour at the west end of the lake. Southwest from Four Mile Point, deep water is about 0.7 mile offshore to the Port Weller entrance where the shoals extend 1.2 miles off. From Port Weller W to Hamilton Harbour, deep water is 0.5 to 1.5 miles offshore

A danger area of the Niagara-on-the-Lake Small Arms Range extends about 1.1 miles offshore, about 2 miles west of the mouth of the Niagara River. The intermittent use of the area is announced by local Canadian Coast Guard Marine Radio Broadcast and may also be advertised in local newspapers. The danger area is marked by buoys.

### SOURCE DIAGRAM

Most of the hydrography identified by the letter "I" was surveyed by the U.S. Army Corps of Engineers prior to 1974. Other outlined areas represent the limits of the most recent hydrographic survey information that has been evaluated for charting. Surveys have been banded in this diagram by date and type of survey. Channels currently maintained by the U.S. Army Corps of Engineers are periodically resurveyed and are not shown on this diagram. Refer to Chapter 1, United States Coast Pilot.

### LAKE ONTARIO

Low Water Datum, which is the plane of reference for the levels strong on the above hydrograph, is also the plane of reference for the charted depths. The lake level is above or below Low Water Datum, the existing depths are correspondingly greater or lesser than the charted depths.

### POLLUTION REPORTS

Report all spills of oil and hazardous substances to the National Response Center via 1-800-424-8802 (toll free), or to the nearest U.S. Coast Guard facility if telephone communication is impossible (33 CFR

### HORIZONTAL DATUM

The horizontal reference datum of this chart is North American Datum of 1983 (NAD 83), which for charting purposes is considered equivalent to the World Geodetic System 1984 (WGS 84). Geographic positions referred to the North American Datum of 1927 must be corrected an average of 0.206" northward and 0.875" eastward to agree with this chart. Joins page 11

SUPPLEMENTAL INFORMATION. Consult U.S. Coast Pliot 6 for important supplemental

Sailing courses and limits indicated in magenta are recommended by the Lake Carriers Association and the Canadian Shipowners Association

Navigation regulations are published in Chapter 2, U.S. Coast Pilot 6. Additions or revisions to Chapter 2 are published in the Notice to Mariners. Information concerning the regulations may be obtained at the Office of the Commander, 9th Coast Guard District in Cleveland, Ohio or at the Office of the District Engineer, Corps of Engineers in Patral

Detroit, Michigan.
Refer to charted regulation section numbers.

### CAUTION

### POTABLE WATER INTAKE

Vessels operating in fresh water lakes or rivers shall not discharge sawage, or ballast, or bilge water within such areas adjacent to domestic water intakes as are designated by the Commissioner of Food and Drugs (21 CFR 1250 93). Consuit U.S. Coast Pilot 6 for important supplemental information.

Due to periodic high water conditions in the Great Lakes, some features charted as visible at Low Water Datum may be submerged, particularly in the near shore areas. Mariners should proceed with

Vessel Traffic Services calling-in point with numbers; arrow indicates direction of vessel movement.

Radar reflectors have been placed on many floating aids to navigation. Individual radar reflector identification on these aids has been omitted from this chart.

For the St. Lawrence Seaway Regulations and Circulars, special equipment, radio frequencies used in Traffic Control and related information, refer to THE SEAWAY HANDBOOK.

### VHF Marine Radio channels for use on the waterways:

**Channel 6** – Inter-ship safety communications.

Channel 9 – Communications between boats and ship-to-coast.

Channel 13 – Navigation purposes at bridges, locks, and harbors.

**Channel 16** – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other

vessels. Contact the other vessel, agree to another channel, and then switch.

Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here. Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

**Getting and Giving Help** — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

### **Distress Call Procedures**

- Make sure radio is on.
- Select Channel 16.
- Press/Hold the transmit button.
- Clearly say: "MAYDAY, MAYDAY, MAYDAY."
- Also give: Vessel Name and/or Description; Position and/or Location; Nature of

Emergency; Number of People on Board.

- · Release transmit button.
- Wait for 10 seconds If no response Repeat MAYDAY call.

HAVE ALL PERSONS PUT ON LIFE JACKETS!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
